Dear Sir;

Response A

All of the claims standing for examination are reproduced below. Those claims herein amended are marked (Amended). Those claims left unchanged are marked (Unchanged).

1. (Unchanged) A background memory manager (BMM) for managing a memory in a data processing system, the BMM comprising:

circuity for transferring data to and from an outside device and to and from a memory;

a memory state map associated with the memory; and

a communication link to a processor;

characterized in that the BMM manages the memory, determining if each data structure fits into the memory, deciding exactly where to place the data
